## Summary

---

Electronics and Communication Engineering graduate with hands-on experience in Java, SQL, MERN Stack development, and database-driven applications. Built full-stack web applications, facial recognition systems, and IoT-based solutions using React, Node.js, MongoDB, MATLAB, and Arduino. Seeking opportunities in Software Development and Backend Engineering.

## Education

|                                                                     |                  |
|---------------------------------------------------------------------|------------------|
| <b>BVRIT Hyderabad College of Engineering for Women, Hyderabad</b>  | 2022 – May 2026  |
| Bachelor of Technology in Electronics and Communication Engineering | CGPA: 7.69       |
| <b>SRI VIJAYA SAI Junior College, Bodhan</b>                        | 2020 – 2022      |
| Board of Intermediate Education, Hyderabad                          | Percentage: 66.6 |
| <b>TSWREIS, Kamareddy</b>                                           | 2019 – 2020      |
| Board of Secondary Education, Telangana                             | CGPA: 10         |

## Skills

---

|                              |                                                                                                                    |
|------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages</b> | : Java, C++, JavaScript                                                                                            |
| <b>Web Technologies</b>      | : HTML, CSS, React.js, Node.js, MongoDB                                                                            |
| <b>Database</b>              | : SQL, PostgreSQL, RDBMS                                                                                           |
| <b>Core Concepts</b>         | : Data Structures and Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks and DBMS |
| <b>Tools</b>                 | : PostgreSQL, MATLAB, Arduino IDE                                                                                  |
| <b>Soft Skills</b>           | : Problem Solving, Communication, Team Collaboration                                                               |

## Projects

---

### TravelTrove – Database Driven Web Application

- Developed a full-stack travel management application using the **MERN stack** with a scalable backend architecture and **MongoDB** database integration.
  - Designed and implemented **RESTful APIs** for efficient data exchange, travel package management, and booking operations.
  - Integrated authentication, authorization, and **data validation** mechanisms to enhance application security, reliability, and efficiency.
- Technologies Used:** MongoDB, React.js, Node.js, Javascript, HTML, CSS

### Automatic Attendance System using Facial Recognition

- Developed a real-time facial recognition attendance system using MATLAB, **ResNet-50** feature extraction, and **SVM-based classification**.
  - Achieved **88% recognition accuracy** by implementing face detection, image preprocessing, and deep feature-based recognition for automated attendance tracking.
- Tools Used:** MATLAB, Excel

### Bluetooth-based Roller Shutter Controller

- Developed an IoT-based roller shutter automation system using Arduino, HC-05 Bluetooth module, and L298N motor driver.
  - Enabled wireless real-time shutter control through Bluetooth communication.
- Tools Used:** Embedded C, Arduino

## Workshop

---

Application-Driven Electronics and Embedded Technology with IoT - IITM Pravartak

Feb 2025

## Certifications

---

- Mern Stack - Atenas code
- SQL(Intermediate) - HackerRank
- 5G Introductory-Level Certification - Qualcomm
- Semiconductor Fabrication 101 - Purdue University of Texas at Austin
